[REDACTED] We should leverage this information to inform the “In Construction (Not in top 20%)” and “ECOP (Not in the top 20%) projects.

For example if there are some circuit segments (e.g. CPZs) that are not in the top 20% of “In Construction” and “ECOP” categories, but they show up on this list as having multiple PSPS events (e.g. PSPS risk materializing), it would make prudent sense to move forward with those system hardening projects.

Thanks to [REDACTED] here is a pair of tables that rank order the circuits and counties by number of PSPS events they experienced of the 11 total in 2019 and 2020. Each table shows the number of customers per circuit or county per number of events. The overall rank ordering is by events times customers (far right column), so I have highlighted the circuits or counties that experienced 7 or more events above a very small customer level.
