Lets remove the Tier 3 kmz from the image. Its all high fire risk, and the blue is distracting. The LAT Long and associated information can be bigger and over the image as there is a lot of negative space.

For Upper lake it looks good, but lets change the first image to include fire tier area and make it not blue 😊  
Remove the HFTD kmz from the 4<sup>th</sup> image.

Looks great!

[REDACTED],

Attached are the drafts for Bucks Creek 1101 & Upper Lake 1101. Please let me know if there are any changes you'd like me to make.

Best,

Looks great for what we need right away. For what we will need by the 14<sup>th</sup> will be what section of this line was burned down in the LNU complex and we will have to look into any field scoping documents we might have for this one to talk about why we chose OH hardening.

[REDACTED],

I threw a couple rough-draft slides together for the Fitch Mountain 08W job. Does this capture everything you were looking for?

I wanted to get it to you quickly so I would have time to incorporate any feedback for changes/improvements /additions/etc. you might have and so we can ensure the entire slide deck is in a similar format. I can recreate using a different map (WebViewer/CYME/etc.) if you'd like.

Thanks,
