## **08W Cost Per Mile Report**

## Data Source

- [ADA].[Delivery.DOT\_WSHP] (WSHP: Project Log)
- SAP AO report PRJ002
- Power Pivot to merge 2 tables and add measurements

## How to run the report

- Refresh the data in Project log sheet to fetch the most current data
- Filter the MAT code to 08W (Only)
- Copy the projects in project log and paste it in PRJ002
- Run PRJ002 one month behind of the current month
- Refresh the data in Cost per Mile Sheet

## How to filter the report

- Filter CN24 Completion Date to exclude <u>2 Weeks of the current month and beyond that</u>
- Filter total installed miles to exclude <u>0 miles</u> (if any)
- Look for cell L10 for Cost Per Mile
- Click on Expand/collapse button in Cell B10 "Cost Element" to see the full projects

For more accuracy, Standard Deviation concept has been added with Max and Min outlier

- In order to use SD concept, click on the arrow in cell D9 "Order" => select Value Filter => Between.
- in Value Filter Window, select Cost per Mile, and enter the Min and Max Outlier as shown in the figure below.
- Look at cell L10 for New Cost Per Mile value

# **Report Customization**

There are many slicers added to the report as below:

- Division
- County
- City
- JOB Owner Name
- SAP Status
- CN24 Status
- WP Reporting Year
- Program Name

- MPP Resources (GC Vs Contract)
- And lastly this report can drilldown and calculate the average cost per mile per Cost Element.
