Public Safety Metrics -- Full Picture

Attachments:

Public Safety LTIP Target Setting V24.pptx

Here is the full deck related to the Public Safety Metrics.

It has

1. The section on the improvements to the Risk Model
2. The section where the detailed NPV based RSE is calculated on a circuit protection zone that is in the top 50 miles where we have the highest risk, and how this risk buydown can be done once the full portfolio of projects is reviewed and approved
3. The section on how targets were developed in the absence of having a fully baked portfolio, using risk reduction rather than miles as our objective.
