[REDACTED]

I know [REDACTED] is out in the field today. What time will he finish up (including dinner), I ask because I want to circle with him on this to see what more we have to do to get it closed out.

Thank you [REDACTED]. Attached is a revised version that includes my edits. I will connect with you tomorrow as I have a few follow-ups for the "Project Example" section.

Subject: Public Safety Metrics -- Full Picture

Here is the full deck related to the Public Safety Metrics.
It has

1. The section on the improvements to the Risk Model
2. The section where the detailed NPV based RSE is calculated on a circuit protection zone that is in the top 50 miles where we have the highest risk, and how this risk buydown can be done once the full portfolio of projects is reviewed and approved
3. The section on how targets were developed in the absence of having a fully baked portfolio, using risk reduction rather than miles as our objective.
