Hi [REDACTED]

The risk buydown curve uses the cumulative total MAVF risk to highlight how much risk is left across the system after a series of 1-N mitigations.

Closer to the point, the order of the rankings is based off of the Mean MAVF score and that can be used to determine where along the curve the CPZ will fall. We have a tool that can help show this. If you input CPZs into the grouping columns on sheet 1, a template for the risk buydown curve will be created.

Happy to connect if more detail or support is needed.

Thank you

I believe so. [REDACTED] can you confirm?

Is the risk buy down curve the same as the Mean MAVF score in the conductor model?

This is the item that I need your help on.

Subject: PSPS circuits

[REDACTED]

From the EOC, can we get all the 2019 and 2020 PSPS events and the circuits and circuit protection zones that were impacted.

[REDACTED] might have that as well.

Then we plot it on the risk buy down curve for system hardening.

I am not expecting it to show up high or low. The model was not developed to predict where we would have PSPS events, so this is an action that we are closing out to put this issue to bed.

Would love to have that closed out by this coming Friday.

If we have the materials assembled (basically 1 page) I will host a call and close it out before Friday.

[REDACTED]

Happy to include you. We have not put the meeting on the calendar. I do want to clarify.

What we committed to doing was.

1. Make sure [REDACTED] and the System Hardening team did a review led by [REDACTED] on the PSPS projects that [REDACTED] was proposing during the Governance Review. This was to ensure that based on 2020 information, these projects were still going to be needed.
2. Get an understanding based on 2020 PSPS Events, if there are circuits where system hardening could provide enough safety buffer thus making them less likely to be impacted by future PSPS events
3. Lastly, plot the circuit protection zones that have been impacted by PSPS events in 2019 and 2020 and show where they fall on the System Hardening Risk Buydown Curve (this is the part you want to be invited to).

Subject: Follow-up conversation

On Friday's Wildfire Risk Governance Ctt call, you committed to a follow-up conversation about assessing alignment between the risk model and the PSPS frequent flyer circuits. I would appreciate being included in these conversations please.

thanks
