▮

Per our discussion yesterday. We still need to resolve our System hardening targets for 2021-2023.

I need more information as to how these targets were set. It is the expectation of those questioning me that we have a calculated reasoning for these targets, not just a number pulled out of thin air.

I also need to understand where the 10% requirement for UG/removal came from. Again, this needs to be a reasoned approach, not just an escalation from the 3-5% we've been completing thus far.

Thanks for your support on this.

▮

Based on where we landed yesterday. The LTIP 0.5 will be 180, and the rest calculated from there. I know you had an updated deck.
I am sending ▮ what I have here. If there is a further update can you send it out.

▮

The PPT is the most current. The Word document will need to be updated.
This is - System Hardening LTIP Target Setting v6

I am also attaching on we used for Filsinger that you might leverage for your narrative in the WMP

Can any of you send me the most up-to-date LTIP description miles and request slide deck? I need it for my narrative in the WMP.

Thanks!

Subject: RE: Wildfire Governance Steering Committee

During today's Wildfire Governance Steering Committee, the committee approved the following system hardening work to proceed (detail in the attached):

- Approval to continue the DSDD Pilot Projects (3 projects, 5 miles)
- Approval to continue with the 3 in-flight PSPS mitigation projects (3 projects, 3.6 miles)
- Approval to start scoping 133 circuits in top tier for PSPS Mitigation, including the 13 community impact projects (10-15 miles); scope approval to include alternatives to system hardening
- Approval to continue the Remote Grid projects (4 projects, 5.7 miles)
- Approval to continue the ECOP projects just below the top 20% cutoff (3 projects, 6.9 miles)

Further details will be provided shortly, including complete list of order numbers
