See how it showed up in Board Advantage.

I think we will need to give it to them in pdf.

Can you set up some time today, so that we reformat.

Sumeet,

We did our best to re-format the materials and replaced on Boardvantage. We will continue to work on how we will upload the materials and how it translates on Boardvantage going forward so we do our best to keep your original formatting.

Thank you team for uploading the attachment to Board Vantage.

I will connect with Andy in the morning as there are several formatting issues with these materials.

[REDACTED]

I checked your calendar and it looks busy for the day on Monday. On Monday morning when you are back can you suggest a good time for you to meet with us?

[REDACTED]

I am not available later today. Have to drive to SD.
Happy to talk on Monday, we will need to rationalize.

This specific report was requested by the board during the LTIP discussion that [REDACTED] had.
As I was not there, I have copied [REDACTED] on this note.

[REDACTED] and I would like to set up a time to speak with you about this report if possible before we put it up to the Board. There is a lot of data here and we are not sure how it will be interpreted without some context or a summary. We are also wondering if there is overlap with the monthly WSP report [REDACTED] puts up for the Board that also covers System Hardening and EVM. In addition, there are reports related to WMP that we have been

asked to provide to the Board on a monthly basis. We would like to make sure the information we're providing in all of these reports is consistent.

Please let us know your availability this afternoon or Monday.

Thank you,

[REDACTED]

Importance: High

[REDACTED]

As part of the discussions that [REDACTED] has had with the compensation committee of the board regarding the LTIP Metrics for System Hardening and Enhanced Vegetation Management, he had stated that we would provide monthly updates at a reasonably granular level

Attached are the two spreadsheets that detail all the work in the pipeline to support reducing the most risk on the system

These files would be informational only, but [REDACTED] wanted to have them sent out with the pre-read.

[REDACTED] has reviewed an earlier version but is out in the field and has not had the chance to review this exact version.

I will be meeting with him to make sure he is comfortable with everything in these files.

For context.

In 2021 LTIP

System Hardening – 1.0 Target is – 200 Miles --- Team is getting 504 miles prepped to ensure we meet the target

Enhanced Vegetation Management – 1.0 Target is 1890 Miles – The team has 1749 miles approved by the Wildfire Risk Governance Committee; more will get added over the next weeks.
