

**Wildfire Risk Governance Committee
System Hardening Project Approvals**

February 25, 2021

CONFIDENTIAL - FOR INTERNAL DISCUSSION

PG&E System Hardening Strategy

Two (2) potential go-forward strategies for System Hardening have been contemplated:

1 Recommended RSE Optimized Risk Buy-down

Objective: Reduce the most amount of risk possible, informed by the RSE score, within the GRC planning period.

Pros:

- Looks towards the long term as climatic risk is worsening
- Significantly lower residual risk for hardened segments addressed and additional risk reduction benefits (i.e., PSPS, ingress/egress) due to proportion of undergrounding likely

Cons:

- Reduced total miles addressable based on time constraints due to proportion of underground
- Due to operational time requirements of undergrounding, some high risk areas may not be mitigated in the near term and must be addressed by other risk mitigation programs (e.g., EVM)

2 Accelerated Risk Buy-down

Objective: Reduce the most amount of overall risk as quickly as possible.

Pros:

- Facilitates risk reduction across the broader service territory (i.e., more miles addressed) based on higher proportion of OH hardening

Cons:

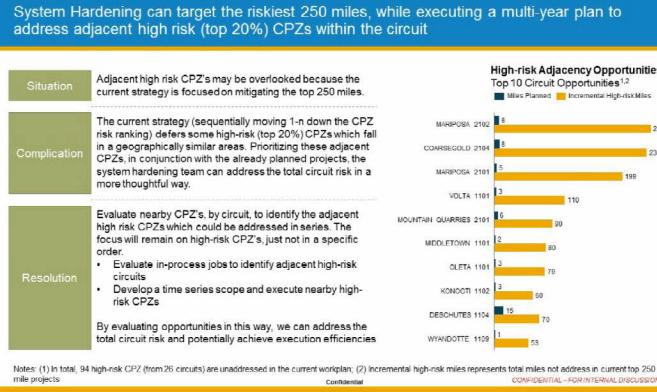

- Residual risk may require "go-backs" with a different mitigation strategy
- Minimal reduction of other risks (e.g., PSPS) not accounted for in current risk modeling

Key Decision – Approve the PG&E System Hardening Strategy

Approval Status	Pending
Decision Detail	
Approval of the recommended PG&E System Hardening Strategy. <input type="checkbox"/> Option 1: Reduce the most amount of risk possible, informed by the RSE score, within the GRC planning period.	
Concerns and Mitigations	
Approvals	
Action Items and Validations	
Confidential	CONFIDENTIAL - FOR INTERNAL DISCUSSION

There is an opportunity to maximize risk reduction from "on-hold" jobs where PG&E has already expended resources to scope and estimate

Situation

Based on the updated 2021 risk model, a significant quantity of scoped / estimated work has been placed on hold to prioritize higher risk segments.

Complication

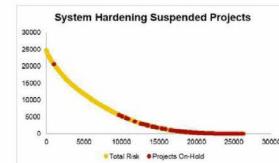

Certain segments of these on-hold projects contain higher risk segments (equivalent to the top 20% MAVF), even though the entire CPZ does not meet the top 20% threshold. These segments of CPZ's can be surgically targeted for system hardening in the highest risk locations to accelerate risk buy-down and achieve greater mileage in the near term.

Resolution

Evaluate the on-hold project list to identify high risk segments for targeted mitigation:

- Review project locations overlaid with risk scores
- Establish risk threshold for targeted mitigation (Recommended threshold is 0.1065—equivalent to top 20% Mean MAVF score)
- Refine scope / estimates to address only the highest risk portions of the project

This strategy will maximize risk reduction in areas which have already expended resources in estimating / scoping and accelerate mileage capture in the near term

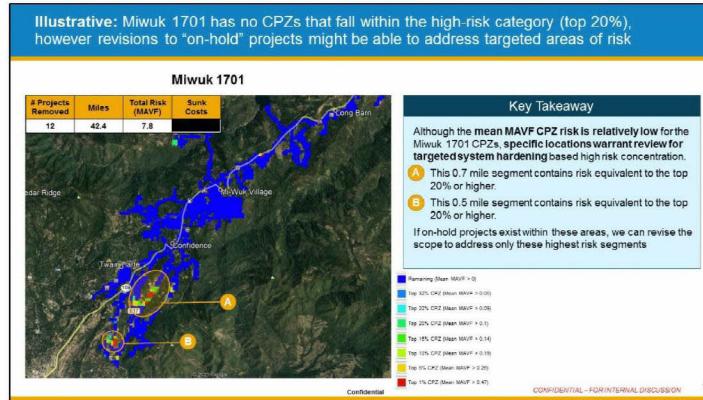

# Projects Removed	Miles	On-hold Project Risk (MAVF)	Sum Costs
478	1,384	1.104	

Represents on-hold projects as of 1.13.2021

Key Decision – Approval to Expand Scope Prioritization and Approve Overarching System Hardening Strategy	
Approval Status	Pending
Decision Detail	
<p>Giving approval to expand the System Hardening Targeting Strategy to include:</p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> The top 20% riskiest CPZs in circuits where projects are already being scoped <input checked="" type="checkbox"/> High risk sub-segments of the on-hold projects, which have equivalent risk scores to the top 20% CPZs 	
Concerns and Mitigations	
Approvals	
Action Items and Validations	

Request to reconsider specific in-construction projects from the on-hold project list and remove from some approved project list (net impact of +11.8 miles)

Workplan Change Request Summary			
Keep	+7.6	Review	+5.9
Remove	-1.7		
Net Total	+11.8		

Request to Keep (7.6 mi)

- Add back projects which were previously placed on-hold based on work expended:
 - In Construction (work started): missed during initial inventory of in construction work – 2 jobs, 3.2mi
 - In construction (not started): significant effort to secure permit and relationships at risk – 1 job, 0.5mi
 - In construction would that would complete an upstream mainline – 1 job, 1.4mi
 - Pending: significant permitting effort which could damage relationships if not executed – 3 jobs, 2.4mi

Request to Review (5.9 mi)

- Confirm the decision to place projects on-hold given efforts expended and other factors:
 - Pending: Significant effort expended to secure easements – 1 job, 3.3mi
 - Pending: Significant effort expended to secure permit – 1 job, 1.1mi
 - Pending: Complete a mainline for previously executed phases – 1 job, 1.5mi

Request to Remove (1.7 mi)

- Remove from existing project list based on dependencies identified:
 - Review of land requirements will require project redesign or imminent domain – 1 job, 1.7mi

- Project level details on following slide -

Workplan change request details - 11 projects added (13.5 mi) and 2 projects removed (3.3 mi)				
Order	Miles	Project	Risk Rating	Rationale, details
1.44	CWSP-PINE GROVE 1102 - RI1722 - PH 2.6	2,571 (69%)	Sigificant progress; 15 poles installed	
1.75	CWSP-STANISLAUS1702-RI1888-PH 1.2	2,388 (69%)	Sigificant progress; 15 poles installed and SAP issues keeping project at UNSE status	
0.45	RECON 2300 FT - IVNS CANYON-DUNBAR 1101	1,794 (49%)	Petty: Required several years of discussion with the CDFW and messaging that the work is critical to the viability of the plan. PGE also developed a mitigation plan and will be on the hook for continued monitoring and reporting to the CDFW. Work is progressing forward.	
1.57	CWSP-BRUNSWICK 1103-UR50078-PH 2.3	2,144 (59%)	Complete CPC (Phase 1) of system hardening work in the CZ2. Other phases have been approved for construction. Phases 1&2 are 75% complete.	
0.51	RECON-63PIANS CAMP ONE TEN MILE FT BRAGG	2,130 (59%)	Petty: Anticipate coastal developer's permit approval in early 2021, which took 2 years to obtain. Public hearing and emergency statutory exemption under CEQA already.	
1.00	CH RECONDUCTR ROB ROY 2105 - S028C117	8,288 (95%)	Petty: Applied for a Coastal Development Permit with the Santa Cruz County and have been working with them for the last year. Permits expected by 11/21/21 and anticipate severe detriment to relationships with COF Ward Santa Cruz if project is cancelled.	
0.88	CH RECONDUCTR - ROD ROY 2105 - S027CC118	1,265 (99%)		
1.75	CWSP-STANISLAUS1702-RI1888-PH 2.3	2,388 (69%)	Easement: 2 of 4 easements acquired [REDACTED] and 4th easement underway [REDACTED]	
1.65	PSPS-Clayton 2215 - CB	1,719 (49%)	Easement: 3 easements accepted or nearing acceptance	
1.06	HALF MOON BAY 1102 - FUCC12457 RPLC10	2,874 (79%)	Petty: GNRRA permit received which took 2 years to acquire	
1.52	CWSP-MIWUK1702-UR6018-PH 1.1	2,111 (61%)	Complete! Mainline; remains mainline hardening completed on either side via other projects	
Remove		(1.72) CWSP-MIWUK1701-OCB-PH 1.5	2,353 (65%)	Issue Identified; location missed during land review that will require redesign of the project or imminent domain. Have been pursuing land rights since summer of 2020.

<ul style="list-style-type: none"> Public Safety Specialist: The full report for this object area includes a copy of the proposed location for the project. A full listing of proposed locations can be viewed online at [REDACTED]. The preferred location is the northern portion of the project area, which is considered to be a low-hazard area in Middletown (ppg 1250-Medium) being the target community located approximately 2 miles east of the project area. Preferred location is the northern portion of the project area, which is considered to be a low-hazard area in Middletown (ppg 1250-Medium) being the target community located approximately 2 miles east of the project area. Preferred location is the northern portion of the project area, which is considered to be a low-hazard area in Middletown (ppg 1250-Medium) being the target community located approximately 2 miles east of the project area. State Tree Potential: High (H3) tree strike potential with no mitigation or mitigation UG hardening is needed. These conditions exist in the northern portion of the project area and any alternative other than "all UG" is not preferred. PPS Mitigation: No mitigation potential due to limited scope of the hardening project. To achieve PPS reductions, additional scope would have to be included. Execution Timeline: Land/Buy/Cultural/Permitting Work required during the off-season (May 15 – Oct 15) and/or permitting. Other Operational Considerations, etc.: There are accessibility issues on the working trail for the northern portion of the project area OH hardening is preferred for that area. Notes: The two options are distinct and separate. Each option was reviewed individually and given separate and unequal considerations. The final recommendation is OH for the northern most tap, Hybrid for the middle tap, and UG for the southern most tap.

Mitigation Decision Tree

The Mitigation Decision Tree diagram illustrates a process for determining the most effective mitigation strategy. It starts with a question about PSPS impact, followed by considerations for critical customers, OHL hardening, and HFRRA Add/Remove. The tree then branches into Tree Strike and ESRP categories, each with its own set of questions and outcomes. The final outcome is labeled "Underground Preferred".

Key Questions		Outcome
PSPS	Is this an area that is impacted directly by PSPS (>8 Frequency or >1,200 Cust Impact)?	Y N 18 events
PSS	Are there any critical customers within zone necessary to protect?	Y N
	Is OHL hardening an acceptable mitigation using distribution line exclusion?	Y N N/A
	Is the area being considered for HFRRA Add/Remove?	Y N [REDACTED] removal approved, project would not be required
Tree Strike	Ingress/Exgress concerns identified by PSS professionals cannot be mitigated by utilizing intumescent wrapped or composite poles.	Y N
PSD	Moderate (6-14) or high (15+) strike tree potential areas in the segment.	Y N Based on Alternative plans
ESRP	Are there any significant dependency or constructability limitations in the areas of impact? (Threshold: 2+ year incremental delay)	Y N
	Does the CP2 meet ECOP threshold (>25% structures warrant replacement) and result in a more timely mitigation method preferred (e.g., OH)?	Y N

Mitigation Decision Tree

The Mitigation Decision Tree diagram illustrates a process for evaluating different mitigation strategies. It starts with a general assessment of the area's impact and then branches into specific mitigation paths for different scenarios. The tree includes nodes for PSPS, Tree Strike, PSD, and ENSP, leading to various mitigation actions such as OH Hardening, Line Excavation, and Remote Grid Preferred.

Key Questions		Outcome
PSPS	Is this an area that is impacted directly by PSPS (>8 Frequency or >1,200 Cust Impact)?	Y N 15 events 15 cust impact
	Are there any critical customers within zone necessary to protect?	Y N
Tree Strike	Is OH hardening an acceptable mitigation using distribution line exclusion?	Y N N/A
	Is the area being considered for HTRA Add/Remove? Ingress/Exgress conditions identified by PSPS	Y N
PSD	Ingress/Excess conditions identified by PSPS	Y N
	Are there any significant dependency or constructional limitations in the areas of impact? (Threshold: 2+ year incremental delay)	Y N
ENSP	Does the CP2 meet ECOP threshold (>25% structures warrant replacement) and result in a more timely mitigation method preferred (e.g., OH)?	Y N
	If alternatives fall within a 100% range, is there additional benefit to choosing an alternative that is not the top ranked RSE?	Y N

Supporting Detail for Recommended Alternative (EDRS Link: 2020-2338):

- Public Safety Specialist: The fuel types for this project area were not noted on the previously held field scoping meeting. Population density for this project area is all considered low. Numerous fires have occurred in this area.
- Strike Tree Potential: Moderate (6-14) tree strike potential in this segment suggests UG or Remote Grid hardening is required.
- Ingress/Egress Considerations: No major egress concern.
- PSPS Mitigation: Remote Grid would allow PSPS mitigation.
- Execution Timeline (Land/Bio/Cultural/Constructability): No known construction or EIS constraints

Supporting Detail for Recommended Alternative [FERS Routing 2021-10751]:

- Public Safety Specialist:** Fuel in the project area are grass, oak woodland and grey pines with patches of brush and scrub oak. Fuel loading is low in the project area, but transition to recent fire in some areas of the project area and adjacent areas to the south. The topography is rolling foothills and ridge top at approximately 1000 ft elevation. There have been no recent fires; however, project area is surrounded by recent fires from the Trailhead Fire (2016), the Mammoth Fire (2009) Cold Fire (2008) and the Custer Fire (2005).
- Strike Tree Potential:** 254 total strike tree potential in the CZ.
- Egress Considerations:** Main roads are Hwy 391 and Hwy 49. Both roads are two lanes paved with no shoulder that would be quickly become inundated in the event of a mass evacuation or rapidly expanding wildfire incident.
- PSPS Mitigation:** 7 operations for PSPS in last 10 years. Approximately 4 miles to get to power source to accommodate PSPS resiliency.
- Execution Timeline [Land/Wild/Cultural/Constructability]:** California red-legged frog; targeted pre-activity survey may be required for overland and in-line section of the project.

Mitigation Decision Tree

The Mitigation Decision Tree diagram illustrates a process for identifying critical customers and determining mitigation methods. It starts with a question about critical customers and leads through several decision points involving PSPS, PSD, and EASOP professionals, ultimately leading to recommendations for O&I hardening or UG replacement.

Key Questions		Outcome
PSPS	Is there an area that is impacted directly by PSPS (>6 Frequency or >1hr Outage Impact)? Are there any critical customers within zone necessary to protect?	Y N Over 1200 cust. Fire Department, telecom & Community Center
PSPS	Is O&I hardening an acceptable mitigation using distribution line deviation?	Y N N/A
PSD	Is the area being considered for IFRB Add/Remove?	Y N
PSD	Are there significant concerns identified by PSD professionals cannot be mitigated by utilizing aluminum or tapered or composite poles?	Y N
PSD	Moderate (6-14) or high (15+) strike tree potential areas in the segment	Y N
EASOP	Are there any significant dependency or constructability limitations in the areas of impact? (There are 2+ years to mitigate)	Y N
EASOP	If alternatives fall within a 100% range, is there additional benefit to choosing an alternative that is not the top ranked RER?	Y N ALL UG Preferred

Workplan change request details - 11 projects added (13.5 mi) and 2 projects removed (3.3 mi)

Order	Project	Rationale/details
Request/Status	CWSP - PINE GROVE 1102 - LR1222 - PH 2.6	<ul style="list-style-type: none"> • 19 poles installed • Recommend that this project be moved to "Keep" status • 17 poles installed • 4 poles remaining • Request to move to "Keep" status <p>Obtaining this permit required several years of discussion with the CDFW and messaging that the work is critical to the wildlife or safety of the public. This is a long-term mitigation plan and will be on the hook for implementing and paying for it regardless of whether or not this project moves forward.</p> <p>• Requests to move to "Keep" status</p> <p>• Projects need to keep 2.1, 2.2, 2.4, and 2.5</p> <p>• All of these projects are in CDRS</p> <p>• 2.1 & 2.2 are 75% complete</p> <p>• Request that this project have 2.3 [REDACTED] be moved to "Keep" status with the other phases.</p>
Request/Status	CWSP - BRUNSWICK 1103 - UR38070 - PH 2.8	<p>This is a project for which we have applied for a Coastal Development Permit with the agency, which has been one year behind on the project already. It is anticipated that the permit will be issued in early 2021. This permit took 2 years to obtain, and many agencies have agreed that it is critical to the critical nature of the work. The agency has recently agreed to use an emergency status to expedite review. CDFW to approve the project, with the understanding that a longer CEAR process would prevent our ability to perform critical wildlife work.</p> <p>• Requests to move to "Keep" status</p>
Request/Status	RECON-6 SPANS CAMP ONE TEN MILE FT BRAGG	<p>This is a project for which we have applied for a Coastal Development Permit with the Santa Cruz County and have been working with them for the last year, in progress with Santa Cruz since Feb 2019. CDFW permit underway since Aug 2020. Project has been delayed due to COVID-19. We are currently awaiting the CDFW to issue the permit. This project is ongoing for the last year. In progress with Santa Cruz since Feb 2019. CDFW permit underway since Aug 2020. Permits expected by 11/1/21. Would be a detriment to our relationship with CDFW and Santa Cruz to cancel this project.</p> <p>• Requests that this project be moved to "Keep" status to preserve relationship with CDFW and Santa Cruz county</p>
Request/Status	OH RECONDUCTR ROB ROY 2105 - 5026CC117	<p>This is a project for which we have applied for a Coastal Development Permit with the Santa Cruz County and have had been working with them for the last year, in progress with Santa Cruz since Feb 2019. CDFW permit underway since Aug 2020. Project has been delayed due to COVID-19. We are currently awaiting the CDFW to issue the permit. This project is ongoing for the last year. In progress with Santa Cruz since Feb 2019. CDFW permit underway since Aug 2020. Permits expected by 11/1/21. Would be a detriment to our relationship with CDFW and Santa Cruz to cancel this project.</p> <p>• Requests that this project be moved to "Keep" status to preserve relationship with CDFW and Santa Cruz county</p>
