I made some updates to the mileage based on recent scoping sessions. Keep in mind that we are counting how many miles are being installed where it is greater than what is being removed. Serving UG requires more circuit miles in many cases, that is why the number continues to rise.

Can you send the excel chart you were showing at the 5:30 meeting today. We want to craft it into the narrative as the work readiness funnel – starting with ~450 Miles to ensure we get the 180 miles completed.

Send it to [REDACTED]
