[REDACTED]  
Here is the consolidated risk assessment prioritization output file. It includes tabs for each of the risk assessment focus areas:

- System Hardening
- Enhanced Vegetation Management
- Dx Inspections
- Tx Inspections

There is a notes tab that indicates why the number of circuits or mileage is different between each of the distribution based analyses, and how operational implementation may need to vary from the risk assessment prioritization. Additionally this was coupled with a narrative of the approach for each assessment that ties into the Excel outputs that I have included here.

Regards,
