Think before clicking links or opening attachments.**** How is the KMZ file produced? Do you have any code you can point me to that produces the KMZ? Or do you use some particular software package or technique to produce the KMZ? On Wed, Mar 24, 2021 at 11:53 AM > wrote: Sorry I just found that I have not responded to your question regarding FEA model outputs: the KMZ format is the only output format, and there is no plan to create shape file outputs. There is talk to export the results to text file such that the data can then be imported into ArcGIS portal, but this task hasn't been formalized yet. Thanks, From: **Sent:** Thursday, March 11, 2021 8:10 PM To: Cc: Subject: Re: Request: Intro conversation regarding strike tree analysis *****CAUTION: This email was sent from an EXTERNAL source. Think before clicking links or opening attachments.**** OK great! before you start to figure out how to proceed, we should attempt to check that your data is actually

I'm going to see if the RaDA data scientists can run an analysis to see if the presence of your data (just the fraction of HFTD 2 / 3 that is currently available) improves the predictive power of our model.

useful.

You mentioned that your model produces output in KMZ format - do you have any other output formats available? In particular, do you have an output of all your results in a single file (or set of files that make up a "shape file")?
Can you send me, or point me to where I can access, all of your results?
We'll be sure to share with you what we learn!
Thanks,

I think we can accommodate this expansion. I am going to be out on Monday and Tuesday.

I've discussed data and analysis with an analysis with data expanded to cover all of HFTD 2/3.
notes below that this might require perhaps 150 hours of labor - that is certainly a non-trivial effort.
I like to ask how we might approach a decision regarding if and when I'll add this topic to our Monday sync meeting agenda.

The color code indicates the tree trike failure risk category at the span level:

- Red spans have more than 15 trees in each span that can break the span
- Amber spans have between 6 to 15 trees in each span that can break the span
- Yellow spans have between 1 to 5 trees in each span that can break the span
- Green spans have zero tree in each span that can break the span

Thanks,

Thanks sorry for my delay in cracking this open.

Can you remind me what the color coding is indicating?

In what form do you produce the results of the calculations for the circuits below?

showed me some color-coded visualizations in Google Earth - did those come from you?

Are you producing KMZ files? Shape files? Raster files? CSV or other tabular data?

Could you point me to a sample of your calculation results?

Much appreciated

Cheers,

PS. My first name is a last name - backwards, I know!

Adding to PSPS work scope, similar calculations have been performed on about 70 distribution circuits (HFTD 2/3 areas) for system hardening scoping projects:

ALLEGHANY 1101	DESCHUTES 1104	IKESWICK LIUI	MOUNTAIN QUARRIES 2101	PUTAH CREI
BANGOR 1101	DIAMOND SPRINGS 1105	KIRKER 2104	NORTH DUBLIN 2101	RINCON 110

BIG BASIN 1101	DIAMOND SPRINGS 1107	KONOCTI 1102	OAKHURST 1101	RINC
BIG BEND 1102	DUNBAR 1101	LAS GALLINAS A 1105	OLETA 1101/MARTELL 1101	SHINC 2109
BRUNSWICK 1103	DUNLAP 1102	LOS GATOS 1106	OREGON TRAIL 1103	SILVE
BRUNSWICK 1110	ELK CREEK 1101	MARIPOSA 2101	PINE GROVE 1102	SILVE
BUCKS CREEK 1101	FITCH MOUNTAIN 1113	MARIPOSA 2102	PLACERVILLE 1112	SILVE
CALISTOGA 1101	FROGTOWN 1701	MIDDLETOWN 1101	PLACERVILLE 2106	STAN
CALISTOGA 1102	FROGTOWN 1702	MIDDLETOWN 1102	POSO MOUNTAIN 2103	TIDEV
CAMP EVERS 2106	FULTON 1107	MIDDLETOWN 1103	POSO MOUNTAIN 2104	TULU
CLAYTON 2212	HALF MOON BAY 1103	MIWUK 1701	POTTER VALLEY P H 1105	UPPE
COARSEGOLD 2104	HIGHLANDS 1102	MIWUK 1702	PUEBLO 2102	VACA

Thanks,

Just select distribution circuit segments that are begin identified for PSPS de-scoping at this time.

Very nice!
For what coverage area is this model's results available? All of HFTD 2 and 3? Or only the potential PSPS descoping areas being considered? Or some other extent?
On Mon, Feb 1, 2021 at 5:41 PM wrote:
This work is part of the PSPS descoping criteria. team builds a mechanical simulation of the distribution line and then uses the LiDAR tree data to identify which trees can reach the line. The simulation then models those trees falling on the line and the results indicate whether the tree is likely to break the line or other components of the line.

Ah, well, I wonder if perhaps I already know about your model

Hi Taran Baran Bar
My team develops wildfire risk models for PG&E - you can learn more about us and our work here https://wiki.comp.pge.com/display/RaD/Risk+and+Data+Analytics
I recently became aware of your work on analyzing tree data (from PG&E's LiDAR surveys, I believe) to inform System Hardening work planning.
My team would very much like to learn more about your work - would you have time to share some details with us? Just a half-hour would be great!
I'm happy to schedule a mutually-available time.
Please let me know, thanks.
Cheers
PG&E
