Crew Special Setup:

Protection Engineer Comment:

Per our discussion yesterday, I dont think there is any reason to need to have PACIRAS cut in at Caribou and Butt Valley while the Caribou Island is still islanded. Since they arent generating at Butt Valley I dont think it really matters either way there.

Caribou:

Hi

Cut Out A for Caribou SW 82, Remedial Action System A Transfer Trip Relay Switch. Cut Out B for Caribou SW 83, Remedial Action System B Transfer Trip Relay Switch.

Butt Valley:

Cut Out A for Butt Valley SW 60, Remedial Action System A Transfer Trip Relay Switch. Cut Out B for Butt Valley SW 61, Remedial Action System B Transfer Trip Relay Switch. When Caribou Island is terminated return PACIRAS to normal at Caribou and Butt Valley.

Thank you,

Have a safe day!

Principal Engineer - PG&E System Protection

Please see the requirements below:

- If the open point is Big Meadows SW87, no temporary setting is required at Westwood CB22. If the open point is Caribou CB62, then temporary settings is required at Westwood CB22: Dev 621/667NA-1 & 621/667NB-1: Change to Setting Group #2.

Thanks,

Operation Engineer Comment:

Heres the OE Requirements for re-establishing LMUD load. I am assuming this set up will be just for today until Honey Lake house power can be established and return the Honey Lake unit (per my conversation with **set to be established** last night).

PRE-CLEARANCE REQUIRMENTS

OE ASSUMPTION:

* Mt Lassen Power, Big Valley, and Burney is in a longer term shutdown

OVERLAPPING CLEARANCE CONSIDERED: *Pit #1 12kV CB12 and section of the 11kV bus (T21-009794) 5/5/2021-9/14/2021 *Caribou Island Set up due fire issue

CONDITIONAL REQUIREMENT: *Confirm Pit #1 CB02 open (normal open)

Work Card - Detailed View

07/19/2021 12:01 SD - Reports return time to CAISO " on T21-013411

07/19/2021 12:29 1228- HAMLET CLOSED HAMILTON BRANCH SW 39, CC&L ENERGIZING TO OPEN WESTWOOD 22

WESTWOOD 22 WILL BE THE NEW BOUNDARY FOR THE CARIBOU ISLAND PER OPS SUPERVISION

07/19/2021 16:55 HONEYLAKE LEVENS REPORTS WILL NOT BE ABLE TO GENERATE UNTIL TOMORROW NIGHT 1800 AT A MINIMUM. THEY HAVE TO FLY OUT A SPECIALIS TO MAKE REPAIRS.

07/19/2021 11:26 TISO - Return switching complete" on T21-013411

07/20/2021 09:07 0907 TM/ notified of CP #3 exceedance 9.22/9MW. 0911 CP under.

07/20/2021 14:57 1145 NS/ reports Caribou CB 292 nitrogen pack may run out and need to be replaced. Nitrogen may last until 07/22/21 once exhausted, CB 292 will open by low air.

Protection/ notified and ran study. States due to the emergency, the island can be maintained with two generators in the Caribou area, protection will be adequate for line faults but will be slow to trip for substations faults. Unable to use Caribou Unit #1 and Butt Valley.

1436 NS/Studley reports, T-line thru CALFire, the "Dixie" fire is going spread and could reach Caribou-Plumas JCT 60kV line sometime tonight, 07/20/21.

System Protection ran some faults based on your request for the Caribou Island with the current setups:

- Caribou CB42 Open (due to outage on 7/19/21)

- Grays Flat SW17 Open (due to outage on 7/19/21)
- Grays Flat SW55 Closed (restoration activities to pickup Grays Flat Sub and Gansner Sub)

- All Temporary Relay Setting changes made prior to entering the island (Caribou CB62 and CB22 are currently in Group

#3 with Caribou CB42 currently open from outage on 7/19/21. No additional Temp Relay settings required)

Caribou PH Generation Unit Requirement for Island:

- System Protection requests three units online prior to entering island

- Protection in island is adequate with two units online, but not optimal. Avoid this configuration if possible due to slow clearing of faults

- Presently, Caribou units#2, 3 & 5 are in the island

- If Caribou CB292 trip open on low air, Caribou unit#5 will be separated from the island. The island is adequate with Caribou units 2 & 3 online, relays will see and clear transmission line faults, but the transformer fuses at Gansner Sub, Grays Flat Sub and Crescent Mills Sub will have slow clearing and will clear low side bus faults in 2 to 3 seconds

- If we only have Caribou units 2 & 3 online, monitor Caribou PH, If a unit trip such that only one unit is online, open Caribou CB 22, CB 42, and CB 62 until more units are available

Transfer Big Meadows, Chester, and Hamilton Branch Substations to the Hat Creek #1 - Westwood 60kV source

This set up would have LMUD separated from the grid, and an open point at big meadows switch 87

- If the open point is Big Meadows SW87, no temporary setting is required at Westwood CB22. If the open point is Caribou CB62, then temporary settings is required at Westwood CB22: Dev 621/667NA-1 & 621/667NB-1: Change to Setting Group #2.

Thanks,
