	7/14/2021, 12:04 PM I have a GCC Ops call at 1230. Can you provide me any intel prior to that time? Especially if it has gone well past the Caribou-Table 230kV. We do know it relayed and is de-energized. Thanks!
	Right now the intel is hard to come by but the fire is making a good push to the north, paralleling the Rim Rd and the River. I will have better intel in about 2 hrs when and field validate- I have to stay at for service until returns.
	Message has been relayed to directly, who said he hasn't issued a press release making that statement, and They are tracking that down now
	Ok thanks
