All

We need ALL these methods changed to the predicate Siemens settings ASAP for the proficiency exercise due 2/6. Currently only IgA, IgM and IgG, TRF and hsCRP are run on Therasos methods- For PT these should be tested on both Therasos and predicate methods. We will report the predicate numbers for all assays.

Adam

Here is the list of Assays on Advia #1 that have been altered from the predicate protocol:

AAT

PREALB

hsCRP

HAPT

TRF

IGA\_2

IGM\_2

IGG\_2

CARB\_2

GENT\_2

PHNB\_2

PHNY\_2

TOB\_2

VANC\_2

VPA\_2

sBNZ

Hey Sam,

I was wondering if you were going to email me the information that I needed in reference to the analytes that I cannot run on ADVIA 1. Could you please also email me the reasoning behind my inability to run those analytes? I know you explained it to me before but it would be handy to have a written copy of that information.

Thanks,

David
