**Subject:** C-reactive Protein Clinical serum correlation

Hi,

Attached are the correlation results for Human clinical serum samples for C-reactive protein. The assay was run on a Neutravidin – Biotinylated anti-CRP antibody coated microtiter plate. The range of this assay is 0.2 – 50 ug/mL. Clinical correlation was also obtained for serum samples (0.5 – 20 ug/mL) with just the anti-CRP antibody coated plate.

Thanks.

Surekha
