Subject: More bad news, sorry

Hi Elizabeth,

I know I sent you some good news last night, re: capillary 1800 data, but I've had a chance to review Fran's findings from the HIV PT investigation she completed last night, and I'm backed into a corner now.

Best to discuss by phone, but briefly: it highlights practices that may jeopardize patient care, so I'm bringing that assay down, as well as all others in BUGS lab, as there's no reason to go assay by assay in our look back after uncovering such issues.

Apologies,

king
