**Subject:** RE: HCG Tests

This patient ordered HCG, Pregnancy Screen, Blood Quant. That is an Edison test with Edison-specific reference ranges in LIS.

It looks like HCG, Blood Quant was run from venous upstairs for this patient, instead of Edison. The result value is <1. However, for the Edison test, the LLOQ is 9.4.

I would recommend a manual report for this patient, in order to update the RR and result-level notes on the final report. I can do this.

In LIS, I would recommend adding 1 as the result value and voiding the result. Then, making a visit note stating the HCG test was run on the Immulite and the value reported was "<1."

Including others here for input.

Thanks,

Max

**Subject:** HCG Tests

[REDACTED] HCG Urine Qualitative, should be entered as Positive or Negative.

[REDACTED] Did not have HCG ordered. Did you mean someone else?

Thanks,  
Max
