Subject: Elizabeth Holmes

Dear Tow Chong,

A young chemical engineer, Elizabeth Holmes who spent a summer with us from Stanford, is now the CEO of an interesting new biotech company in the states. She has some technologies that she would like to codevelop with us in Singapore and is talking to the EDB and Temasek Life sciences for funding to set up an R&D unit here. I thought however, that much of her current work is pertinent for the SERC RIs. Moreover, we may want to work together with you between the GIS in her company, and SERC RIs to capitalize on Boon's developmental funds.

She has an appointment to meet with you tomorrow. Let me know how that meeting went and whether we have some possibility to work together.
