Sorry, was meeting with a candidate referral this evening.

Unfortunately, I don't have enough information regarding this particular sample integration issue. It may have been hemolysis, as this can cause poor PT results.

Daniel – sorry to flood your inbox with these today. We are also going to bring in Nishit to assist moving forward – this doc I do need to call back tonight and would like to do so before it's too late. Anything I can do to expedite here? Just need to know what happened so EAH and I can work on messaging to the doc.

Thanks

Unfortunately this doc called back and reached a different CSR who saw Adam approved the redraw, forgot to check with me, and told the doc we need a redraw. The doc wants to talk to "someone in the lab" tonight and gave his cell.

Need to discuss messaging for my call with this doc, with regard to reason for the redraw.

Thanks

**Subject:** Fwd: Redraw.

Daniel - please see notes below. From what it seems a redraw is necessary given the disintegration of cells. Please let me know if otherwise.

Thanks

Hi Christian,

Can you please approve this redraw?

Thanks,  
Anam

Hi Max

Pt. had abnormal results & during slide review it looked like those results were not

due to any medical condition but due to disintegration of cells.  
I discussed this pt. with Adam & he decided to go for a redraw.

Thanks  
Gurbir

Hi Adam

I have submitted request for redraw for CBC & ESR on pt. due to  
compromised integrity.

Thanks  
Gurbir
