The situation is still pretty fluid.

We are working in parallel to run sample on Edison as well as Immulite. But found out this morning that reagents for Immulite are on order and back ordered.

So we are pushing even harder to get them run on Edisons. Will let you know more soon.

Yes – samples currently being run – had two docs just call about HCG delays – CS checked on status and the lab said they are failing QC and don't have an expected turn around time. I am getting exact patient/sample info

Thanks

Is this new reports? There were some HCG issues resolved earlier this week.

Hi Daniel –

Seems like there have been multiple instances of HCG taking more than 48 hours to run in the lab. The lab mentioned that QC continues to fail preventing results generation. Wanted to see if you know anything about this or that I could do?

Thanks

Christian
