About the Campaign

Campaign Overview

CDC's Rx Awareness campaign tells the stories of people whose lives were impacted by prescription opioids. The goals of the campaign are to increase awareness that prescription opioids can be addictive and dangerous, to reinforce that help is available for those suffering from an opioid use disorder, and to encourage those struggling with prescription opioids to visit the campaign website to locate help and resources. Rx Awareness launched in 2017 and focuses on adults ages 25–54 who have taken opioids for medical use or have misused opioids at least once.

If you're struggling with prescription opioids, there is hope. Recovery is possible.

Expanding Messages and Reach

In 2019, CDC filmed and captured more real stories to add to the suite of campaign materials. The new ads focus on audiences heavily impacted by the opioid overdose epidemic, including pregnant women, veterans, younger adults (25-to-34-year-olds), older adults (45-to-54-year-olds), and American Indians/Alaska Natives. State and local health departments and community organizations can use the tested Rx

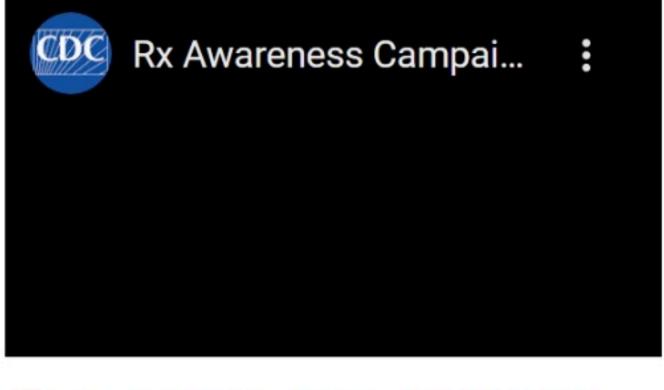

Awareness campaign materials and resources to launch campaigns, support local prevention activities, and raise awareness about the risks of prescription opioids.

The goals of the campaign are to:

- Increase awareness that prescription opioids can be addictive and dangerous.
- Lower prescription opioid misuse.
- Increase the number of patients seeking nonopioid pain management options.
- Increase awareness about recovery and reduce stigma.
