Thanks Eric.

Arvind/Penny - FYI below and Eric and I are in agreement.

Importance: High

I agree with both Penny and Arvind's position. Do not discuss details of deaths, but rather focus on postmarketing reports and how we proactively address them.

Eric - as per below, Arvind is confused about Penny's response because the MSLs are out there using slides that have the line item information on 3 of the cases. I do not feel he should be presenting the details of these cases at this point in time but we need an aligned approach for the organization. Please advise - thanks.

Arvind,

Can you please help me understand more about your plans with regard to item 4?

item 4. when did we agree to discuss the specifics of the deaths in public like this? We have always said do not get into the details of the cases at these meetings as it can come out of a meeting with a different story and we'll be just a few weeks away from Juergen presenting before the FDA AC. Wouldn't you continue with our philosophy of indicating there were postmarketing reports of deaths and serious AEs which led to root cause analyses indicating the causes were blah blah blah etc?

Many thanks,
Penny

Just confirming you will be attending our Ad Board on April 4-5 in Orlando. We would like you to present 3052 data as well as the noncancer BTP characteristics data.

Thanks. Stacey
